

Video Clip Links Inclusion for All

Quality Inclusion for Children with Autism

This series of video clips shares insights from teachers and parents on what it takes to run a strong inclusive classroom that successfully integrates children with autism into a mainstream early childhood program. Highlights include wonderful examples of typically developing peers supporting their friends with autism, fun social skills role-plays, and ideas on how to make the best use of assistive technologies and techniques, visit the link below to view the video clips.

The website is also an excellent resource for curriculums that promote inclusion.

Making Inclusion Work in Science Education

The teacher, Jean, a 3rd grade teacher, takes science education reform to a personal level. Follow Jean as she works to improve one aspect of her teaching: meeting the diverse learning needs of her students. The case study follows Jean over the course of a year and is divided into three modules: the teacher's background and the problem she chooses to address, the chosen approach and implementation, and the outcome with assessment by the teacher and her advisor. This video production is funded by the Annenberg Foundation.
